EU Citizen (Spanish) / Right To Work (PSW)

PROFILE

AI and full-stack engineer with an MSc in Financial Data Science (Distinction) and a foundation in particle physics. At a Swiss investment firm I lead full-stack engineering across trading platforms, data infrastructure and AI applications for investment, hedge-fund and investor-facing products. Previously maintained multi-terabyte data pipelines at CERN and developed computational tools at the University of Zurich. Seeking a role in applied / agentic AI where I can design and ship LLM-driven systems on top of solid data foundations.

EDUCATION

University of Surrey 2025–2026
MSc Financial Data Science (Distinction) | Relevant: Big Data Systems, Data Engineering, Machine Learning, Parallel Computing, Scientific Computing
Boston University 2018–2022
BSc Physics (Minor in Mathematics)
University of Zürich 2022–2024
Graduate coursework in Scientific Computing, Numerical Modelling, Parallel Computing (C/C++), Data Analysis

TECHNICAL SKILLS

Programming: Python (pandas, NumPy, SciPy), C/C++, SQL, JavaScript/TypeScript, React, Flask, FastAPI, Node.js
Data Engineering & Pipelines: Python/C++ pipelines, ETL, batch & streaming, pub/sub (Redis), data validation, REST APIs (Flask/FastAPI), reproducible workflows
ML & Agentic Systems: scikit-learn, time-series modelling, feature engineering, model evaluation, multi-agent pipelines, LLM-based agents, anti-hallucination quality controls
Systems & Infrastructure: Docker, Linux, Git, HPC environments, parallel computing, multi-tenant architectures, trading platform design
Data Systems: relational and document DBs, multi-tenant data isolation, data-quality monitoring, real-time data feeds, CRM/Twenty integration

EXPERIENCE

Asymmetrica Investments AG (*Remote — Zug, Switzerland*) Feb 2026 – Present
Head of Development May 2026 – Present

- Lead engineering of the firm's full-stack data and AI platforms spanning quantitative research, trading, and investor-facing products.
- Own backend services (Python/Flask/FastAPI), React/TypeScript frontends and containerised infrastructure, with multi-tenant data isolation and quality controls on AI-generated content.
- Mentor and review the work of junior engineers and interns across backend, frontend and data.

Research Analyst Intern Feb 2026 – May 2026

- Built full-stack research infrastructure and automated market-data ingestion across multiple sources, with a backtesting harness, walk-forward validation and reproducible workflows.
- Integrated and benchmarked quantum-inspired components (variational quantum circuits, quantum kernels, reservoir computing) against classical models inside the research pipeline.

Victoria Solutions (*London, United Kingdom*) Feb – May 2025
Data Analyst Intern

- Built Python and SQL workflows to extract, clean, and aggregate operational datasets for recurring reporting.
- Developed automated validation checks to improve data reliability and reduce manual errors.

Paul Scherrer Institute / CERN CMS Phase-2 Upgrade (*Villigen, Switzerland*) Mar – Oct 2023
Data Engineer / Research Assistant

- Developed and maintained Python and C++ pipelines processing multi-terabyte, high-frequency datasets from the CMS detector.
- Implemented data-quality checks, monitoring logic, and reproducibility standards across shared pipelines.

University of Zürich (*Zürich, Switzerland*) Sep 2022 – Jun 2024
Graduate Teaching & Research Assistant

- Conducted computational research in particle physics, building simulation and data-processing tools in Python and C++.
- Studied graduate courses in parallel computing, scientific computing, and numerical methods.
